

Closurematic WA Version – An Example of a Jurisdiction Specific Adaptation

Friday 26.11.2021

09.00 – 10.30 (CET)

Philip Mittelstädt

Project Manager – DMT GmbH & Co. KG – Hydrogeology and Watermanagement

In a minute you are going to see:

- A live presentation of jurisdiction specific version of Closurematic
 - It is an example. Closurematic can be tailored to your specific situation!
- It contains information compiled from a publically available and accepted Mine Closure Plan for the Norseman Gold Project, WA
 - You can download the plan here: [MINEDEX \(dmirs.wa.gov.au\)](https://dmirs.wa.gov.au)
 - All information on costs, work hours, closure actions, etc. are invented for demonstration purpose and do not reflect the actual situation at the Norseman Gold Project.
- In case of technical difficulties → don't stress! I will show screenshots and a demo on www.closurematic.com.

Demonstration

Summary & Way Forward

- The demonstration shows that jurisdiction specific adaptation is possible.
- The creation of a knowledge base for individual domains or features will ensure data continuity during long lasting closure process

If you are interested in the full Closurematic experience:

- Closurematic can be purchased in a pre-defined version and/or with individual customization
 - individual template structure, guidance files, tools and functionalities
 - compiling existing data into the system
- Several installation options possible (e.g. cloud hosted, on SQL Servers)
